Bella VITA® Nova
Timeless showering luxury

The swing door's benefits:

Bella Vita Nova corner entry with fixed panels

Bella Vita Nova swing door with side panel

Clean, linear profile, with lightly rounded edges makes for a timeless aesthetic design. And its functionality is convincing.

Flexibility with a generously dimensioned access width

Above all, the Bella Vita Nova shower enclosure series offers a wide variety of swing doors. And there is a good reason: swing doors that open both to the inside and to the outside keep the water inside the shower enclosure. Whether assembled with a stationary panel and a side panel, whether built into a niche or as a corner entry – swing doors are particularly user friendly and guarantee a generously dimensioned shower access.

A lot of space inside the enclosure with a Free Base shower tray installed flush to the floor

A Bella Vita Nova swing door with a fixed panel and side panel. The swing door with easy movement to the inside and to the outside – the lifting-lowering hinge makes opening and closing easy.

The hinged folding door's benefits:

Little space can be optimally used

The folding pivot doors in the Bella Vita Nova series are especially easy and convenient to use. The wide, completely usable access opens up an unencumbered showering experience – designed especially for installation flush to the floor. The Bella Vita Nova folding pivot door can be installed flush to the floor or together with a shower tray. The door

folds open tightly against the wall. The high Duscholux quality is evident in the design: The use of high-grade materials like aluminium, tempered safety glass and solid, heavy-duty hinges for longevity and optimal use of the space.

Thanks to the reduced profile design together with the glued hinges, the glass panels form a flush surface to the inside and are quickly and easily cleaned.

The sliding door's benefits:

Elegant and functional

A shower enclosure series that can do everything and provides a lot of benefits. The Bella Vita Nova with one or two sliding doors realises the basic concept of the shower enclosure series with great skill. Its exclusive design makes it possible to realise unusual architectural ideas. This applies equally to the round model and to the corner and

niche models. The access with neither a threshold nor disturbing profiles and the convenient sliding doors guarantee functionality and water-tightness in all sizes – for persons of any age who want something beyond the ordinary.

CLEARtec finishing

Cleartec is a special finishing treatment for tempered safety glass based on nanotechnology, applied to the glass directly in the factory, to reduce dirt and limescale deposits. Cleartec significantly improves the ability to clean, care and maintain the glass's quality. Water pearls off, dirt deposits are easier to clean. The regular care of the shower panel is made significantly easier.
