## Transparency and clear lines

**Collection 3** is a new frameless shower enclosure series with striking contours, fulfilling even the most stringent aesthetic requirements. Flat hinges and wall brackets made from chrome-plated metal, slim-line crossbars and an innovative handle complement the linear design. A visual highlight for modern bathroom solutions.

The straight hinges with lightly rounded edges, the wall brackets and the ergonomic handle are of a deliberate low-profile design. Nothing interferes with the clear contours of the light overall impression.

Collection 3, swing door with fixed panel and two side panels. Providing coherent overall lines: chrome-plate covers hide technical fittings made from high-quality zinc die-castings without interfering with the desired transparency.

**Latest UV and light-curing adhesive technology** allows hinges made from chrome-plated zinc diecasting to be permanently connected to the external surfaces of the glass.

**The wall brackets**, too, support the flush design of Collection 3. The pre-assembled adapters are regularly subjected to load tests of up to one ton.

**The flush interior** makes cleaning easy and effortless as there are no protrusions or bolted connections that could cause water or lime scale deposits.

## Technical quality and clever details

**The trend-setting adhesive technology** of Collection 3 provides flush interior surfaces without any protrusions. This makes it considerably easier to clean the shower panel. Another advantage: outwardly and inwardly opening pivoting doors made from sturdy 8 mm glass retain any dripping water inside the shower. The comfortable lifting and lowering mechanism of the door hinges supports the smooth opening and closing – a perfect movement demonstrating the high quality of the shower panel series.

**This futuristic process** is already used by Duscholux today. The tried and tested UV and light-curing adhesive represents the latest technology and is also used in the construction of glass facades. The adhesive permanently bonds glass and metal without losing any strength as a result of direct sunlight, temperature fluctuations, contact with water or cleaning agents. On the contrary: tests carried out by independent institutes and certification bodies have shown that the used adhesive offers a particularly high resistance against humidity and chemicals.

**100% adhesion** just like a Gecko. The sympathetic lizard that effortlessly runs across smooth glass surfaces is the symbol for the adhesive technology of Collection 3.

**Even the handle**, following the design contours of the shower panel, is provided as a flush internal model. The retractable grip disk ensures reliable operation inside the shower enclosure.

Collection 3, door with fixed panel in combination with side panel

## Product diversity and individuality

**The actual versatility of Collection 3**, is apparent from the different room situations to which this shower enclosure series easily adapts. This is due to the numerous product models offered as part of the Collection 3 standard range. Irrespective of whether the shower features a corner entry, a side panel, a round design or is fitted in a recess – the product range covers different dimensions and combinations. Great diversity can be so individual.

**Wall connection profiles** that can easily compensate for wall bevels of up to 12 mm complete the Collection 3 range.

**Magnetic closure** integrated in chrome-plated slim-line aluminium strips ensure reliable and comfortable closing of the swing doors.

**The area available** determines the Collection 3 modules used. If required, additional side panels can optimize the shower area. The fixed panels of the doors can be reduced down to 180 mm.

## Amazing space-saving design for any bathroom

**Depending on your personal preference** Collection 3 can add an expressive or a restraint look to your dream bathroom. And that is a further strength of the system. Two hinge options allow direct connection to the wall or installation in connection with a fixed part – and that in a variety of different dimensions, thus providing an optimum and sophisticated solution for room corners and recesses.

**Collection 3 recess-mounted swing doors:** Transparent does not always mean a clear view. Collection 3 offers a number of glass solutions and optionally also with partial fine satin effect with a stripe height of 1000 mm.

**The wall hinges** reflect the design principle of Collection 3 shower enclosures. They are flat with fine chrome plating and fix the glass safely to any wall.

Collection 3, swing door in recess with side panel in line

## Tailor-made and special

**Collection 3** focuses on providing planning and installation options. It offers convincing solutions for any bathroom layout by offering individual glass treatment -bevel or cutout- and shower enclosure heights of up to 2200 mm. Special requests do therefore not represent a technical problem and are simply manufactured to your requirement.

Collection 3 individual solution, swing door with fixed panel and side panel, glass cut-out as required. With Collection 3 your bathroom becomes more than just a wet room – providing solutions for any requirement.

**A glass cut-out** providing special luxury for your shower. There are no limits as regards individuality and personal taste.

**The unobtrusive and attractive** water deflector strip ensures that any leaking splash water remains in the shower area.

**Collection 3 freestanding side panel** with additional splash protection. Collection 3 offers walk-in solutions of up to 2300 mm height.

## Generous proportions and floor level comfort

**In particular in shower areas of generous proportions** freestanding walk-in solutions can produce an attractive architectural feature. The floor level glass structure without doors reduces the number of required fittings and emphasises the transparent harmony of the design. An additional 90° side panel improves splash protection, making showering an even more pleasant experience.

**Providing an attractive** as well as a sturdy design. The elegant crossbars are available in various models.

**Collection 3, freestanding side panel.** The crossbars can be ordered as illustrated or as an L-shape version (see also left image).

**Collection 3, Round version** for space-saving corner solutions. With its generous standard height of 2000 mm, Collection 3 is also the perfect combination for ultraflat shower trays such as the Duscholux Free Base.

## Standard solutions without compromise

**The special feature of Collection 3** is the many high-quality solutions offered by its basic product range. Apart from a generous standard height of 2000 mm and swing doors with lifting and lowering mechanism, the range offers continuous flush interior surfaces as well as chrome-plated hinges, wall brackets and handles. In addition there are numerous models and combination options for installation and equipment – offering considerable scope for individuality and creativity.

Collection 3 corner entry with fixed panels. The corner solution for purists: straight lines ideally adapted in height and size to existing room proportions.

## Practical examples and options

**The greater the choice** the more difficult it is to choose. That is why we have provided illustrations of the most frequently used installations. This makes it easier to choose a product and produce your dream bathroom. A further advantage is our simple pricing with an all-inclusive price for each installation. It is hardly possible to make it easier and more transparent.

## Uncomplicated assembly by expert installers

**Ease of installation** is a decisive product advantage of Collection 3. Whether it is a standard or individual solution – the installation produces only a minimum of dust, dirt or noise, as from the outset, Collection 3 was designed in such a way that the components can be easily installed on site.

### Installation extract

- 1 ]** Well thought-out installation of wall bracket. Using the adapter, the glass is first secured in the fitting to allow marking the wall for drilling. The glass can simply be adjusted by sliding the adapter.
- 2 ]** Also uncomplicated assembly of the wall hinge. The hinge is fixed to a slim-line wall profile allowing easy marking for drilling at the exact position.
- 3 ]** The adjustable metal plate allows precise alignment of the wall hinge also in difficult installation situations.
- 4 ]** Blocked hinge allows easy hanging of doors. The door is held in the hinge and cannot fall out during fixing. It is automatically adjusted by tightening the bolts.
- 5 ]** Uncomplicated installation of the crossbar. Fixings are bolted to the wall and the crossbar is pushed on.
- 6 ]** The handle, flush with the inside surface of the glass, is attached by a bolt to the external handle, preventing any rotation.

## Decisive advantages and equipment

**Collection 3** not only provides a sophisticated architectural design and refined transparency but also offers optimum quality with many well thought out product details. The wide variety of models provides for particular individual room solutions. Added to this is the interior flush finish, allowing easy cleaning of the shower enclosure, swing doors with lifting and lowering mechanism and an elegant magnetic closure. All aspects contribute to making Collection 3 extra special.

## CLEARtec finish

**Cleartec** is a special finish for tempered safety glass based on nanotechnology reducing dirt and lime scale deposits and is directly applied to the glass at our works. Glass surfaces finished with cleartec are significantly easier to clean. Water simply pearls off, dirt can be removed more easily. Regular cleaning of the shower panel is made considerably easier.
